

Engineering Consultancy

ARC, the Best Kept Secret in Efficiency!

Our team of **highly qualified engineers** span all disciplines of CAD, mechanical, fluid flow, and electrical. They are available to work on projects for our customers either as a stand alone team capable of completing the entire project, or as a supplementary team to their existing resources. ARC currently uses Creo Pro/Engineer CAD software, however we are able to collaborate and work with any CAD that our customers employ.

ARC specializes in vehicle design consultancy. Having the experience with playing team roles in full vehicle design cycles, we have the understanding and personality to provide a supporting or lead role in large scale design programs. **Maintaining flexibility**, ARC also likes to maintain smaller consultancy projects in several different vehicle attribute areas.

ARC's record of confidentiality, it is no surprise we have become an important "go to" team member for multiple OEMs. As a **tier one supplier**, we are fully integrateable into your company's specific processes and requirements.
